ON THE JOB TRAINING

Report of the person in charge at the work center

(Private-owned educational centers)

STUDENT: Darío Nieto Lorente	
SENDIN ORGANISATION: Tajamar	
FIELD OF VOCATIONAL EDUCATION: Technician in Microcomputer Systems and Networks	
HOSTING ORGANISATION: Pontificia Università della Santa Croce	Total hours: 375
COMPANY'S TUTOR: Jesús Toribio Matias	Dates: from 10/03/2025 to 23/05/2025

1. AREAS, DEPARTMENT OR WORK POSITIONS WHERE THE ACTIVITIES HAVE BEEN DEVELOPED

- **Work Areas:**
  - IT department of the Pontifical University of the Holy Cross, including classrooms, streaming rooms (Aula Minor, Aula Magna, Senate), and event technical support (Regia).
- **Technical Skills and Tasks:**
  - Technical support and audiovisual equipment setup.
  - Network configuration and workstation deployment.
  - Installation of hardware and software (Windows, macOS, printers, projectors).
  - User account management and system maintenance.
- **Personal Skills:**
  - Troubleshooting and incident resolution.
  - Teamwork.
  - Communication.

2. ASSESSMENT OF THE STUDENT'S STAY IN THE WORK CENTER

- **Technical learning.** Although the institution does not use cutting-edge technology, the student performed tasks at a technically high level within the available infrastructure. He gained hands-on experience with Windows and macOS systems, Axess access control technology, OBS for live streaming, and basic server operations. He also learned disk cloning procedures (Clonezilla) as part of OS maintenance and deployment, while independently resolving real-life incidents.
- **Soft skills.** Throughout the training period, he significantly improved his communication skills and autonomy. At the same time, he learned to collaborate in pairs and demonstrated excellent problem-solving abilities, adapting to different situations and working well with colleagues despite occasional language barriers.
- **Integration and contribution.** The student was well integrated into the workplace environment, earning the trust of his supervisors and co-workers. His presence added a fresh perspective to the office and relieved the workload of the technical team by independently resolving many issues.
- **Professional growth.** The student has experienced a very positive period of professional development. The exposure to real-world scenarios has enabled him to learn how a systems technician organizes tasks and solves problems daily, using both structured methods and flexible thinking.

3.SUGGESTED MODIFICATIONS TO BE INTRODUCED IN THE TRAINING PROGRAM

I found the training program to be well-structured and suitable for a student in vocational education. However, I believe it could benefit from a higher volume of assigned tasks to keep motivated students more engaged throughout the internship. While the level of autonomy was appropriate, I felt that the technical complexity of the work was somewhat limited by the institution's infrastructure. For students with a more advanced profile, it would be helpful to have additional challenges or projects. Overall, the preparatory phase of the Erasmus+ program was adequate, and I would strongly recommend this destination to students who want to experience the daily reality of a systems technician in an international academic environment.
